Chamberlain Brings Lights, Video, Action to the Smart Home with New Connected Products at CES 2015

Chamberlain Connects the Home and Smartphone with the First Wi-Fi Connected Garage Door Opener and Notifi Video Door Chime

LAS VEGAS, Nev. – January 5, 2015 – Chamberlain, renowned for excellence in do-it-yourself garage door openers and connected devices grounded in safety, security, quality and peace of mind, announced today at the [Consumer Electronics Show](#) (CES) the industry's first fully integrated, smartphone-connected Wi-Fi garage door opener and the first smartphone-connected video door chime to combine lights, video, notification and communication into one sleek product. The new [Chamberlain Wi-Fi Garage Door Opener with MyQ Smartphone Control](#) and soon-to-be-available [Chamberlain Notifi™](#) take the company's innovations from the garage door to the front door, bringing new levels of control and awareness over what's happening at home from anywhere in the world.

Chamberlain Notifi gives people peace of mind from anywhere by allowing them to know and see who comes to the door, and chat with them while home or away.

Consumers regularly wonder if they left their garage door open after leaving home. Chamberlain's Wi-Fi Garage Door Opener is the first to have Wi-Fi and smartphone connectivity built in, solving this problem using MyQ technology to allow consumers to see if their garage door is open, and to close it from anywhere. Available this spring, Chamberlain's new opener has everything consumers need to quickly and easily connect their smartphones to the garage door opener. Later this year, Chamberlain will bring its Notifi video door chime to the market, which is the first to combine motion detection, lights, door chime, notification and communication in one smart device. Stylish, affordable and simple to install, Chamberlain Notifi gives people peace of mind that even when they're away, home is near.

“Chamberlain has developed the highest quality garage door openers for more than 40 years and we’ve extended our technology to the connected space, where consumers expect the same safety and quality,” said Cory Sorice, Vice President of Marketing for Connected Products and eCommerce at Chamberlain. “MyQ has become the preeminent connected way to manage coming and going moments for the home, working with the top smart-home providers in the industry. We’re innovating new connected products that incorporate video, lights, notifications and better awareness for consumers. It’s going to be an exciting year for Chamberlain, our partners and our customers.”

New Connected Home Partnerships, Including Apple HomeKit, Put Chamberlain MyQ at Center of the Smart Home

[Chamberlain](#) is one of the top connected-home brands in the industry with its MyQ technology. Through [partnerships](#) with some of the leading consumer electronics manufacturers and home-improvement retailers, Chamberlain offers MyQ integration with other popular connected devices. Chamberlain announces new support for [Apple® HomeKit](#) technology. With HomeKit, customers can monitor and control their MyQ garage door from anywhere using their iPhone, iPad or iPod touch. As a secure platform, HomeKit and MyQ support access and control for multiple home devices from within one iPhone, iPad or iPod touch app. For details on Chamberlain integration partners visit <http://www.chamberlain.com/technology-partners>.

Chamberlain at CES 2015

Chamberlain is unveiling its product roadmap at the [Consumer Electronics Show](#) in Las Vegas, January 6-10, 2015. Chamberlain will demonstrate its new products at the [Digital Experience](#) media event Monday, January 5, at the Mirage Events Center, Mirage Hotel, and in the Chamberlain hospitality suite at the Venetian Hotel. To schedule a meeting with the company, please contact ssteinwinder@purdierogers.com.
